

**Bragaw Pipeline
Replacement Project
near Anchorage's
Chester Creek Trail**

ENSTAR is in the process of replacing a portion of our transmission pipeline system between Northern Lights and Providence Drive, an area that neighbors many popular recreational trails including the Chester Creek Trail system. Here are some frequently asked questions we've received in connection with this project:

What are you doing and why? This project replaces 3,000 feet of 12" high pressure pipeline that was originally installed in the 1960s. The Bragaw Pipeline is critical to natural gas delivery in the Anchorage area. Replacing this segment of pipe will improve the safety and reliability of ENSTAR's system.

Will the trails be closed? We don't anticipate trail closures in connection with this project.

Are you building a road? No. ENSTAR has cleared brush and trees along the pipeline right-of-way to access the project, but once work is completed in the area, the right-of-way will be revegetated.

Will you replant the trees? ENSTAR won't replant the trees as their roots risk the safety of buried pipe in the right-of-way. However, we pride ourselves on being good stewards of the land we work around and always seek to leave our work area in as good or better condition than we found it. ENSTAR frequently revegetates impacted areas and takes precautions to protect the land during construction. Minimized impact to the wetlands in the area is one of the reasons we opted for winter construction on this project.

When will the project finish? We anticipate the majority of the project will be done by early April 2018 with some final work completed in early June once the weather warms.

We recognize the importance of Anchorage's trails and apologize in advance for any inconvenience that this project may cause. We are working to coordinate with trail users and events along the trail to help avoid any conflicts.

How to Identify an ENSTAR Employee

Our employees can be easily identified by their uniforms, which include ENSTAR's logo. They also carry ID badges and generally drive an ENSTAR vehicle. If an ENSTAR employee is in your yard, feel free to ask for ID or call ENSTAR's Engineering Services at 907-334-7740 (1-877-907-9767 outside of Anchorage) to confirm his or her identity.

Hot Water Safety

Children's sensitive skin burns easily. Help keep your kids safe by following these three rules:

- 1** Never put a child into the tub while the water is still running.

When filling the tub, put your hand all the way into the water. Spread your fingers and move your hand back and forth the full length of the tub to check for hot spots.
- 2** Always stay with a child while they are in the tub. Children can turn on the hot water in a flash and it only takes seconds to burn or drown.
- 3** Water coming out of the faucet should never be hotter than 120 degrees. If your water heater is set too high, turn it down or have your plumber do it for you.

REMEMBER! The most painful burn is one that could have been prevented.
