

ENSTAR Transmission Lines: The Lifelines of Southcentral Alaska's Gas Distribution System

ENSTAR owns and operates nearly 500 miles of natural gas transmission pipelines in Southcentral Alaska. These pipelines transport natural gas from Cook Inlet gas fields to ENSTAR's residential and industrial customers. Buried beneath rights-of-way, these transmission pipelines range from 4" to 20" in diameter and are made of high strength steel. They operate at pressures from 500 to over 1,000 pounds per square inch. The pipelines are designed and maintained to stringent safety standards and are cathodically protected to prevent corrosion. ENSTAR performs annual leak surveys with highly sensitive instruments that are capable of detecting even the smallest gas leaks. Aircraft are used to fly pipeline routes on a regular basis to look for abnormal right-of-way conditions. The safe operation of these pipelines is ENSTAR's number one priority.

numbers to know!

Know what's below.
Call before you dig.

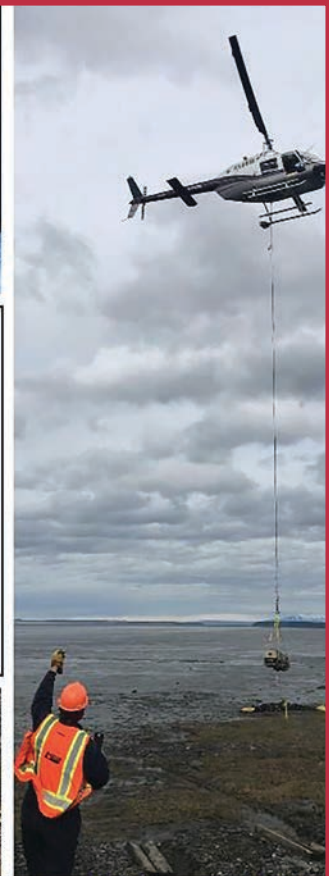

Always call 811 two days before starting any digging project to get locates of your underground utility lines.

If you suspect a gas leak, call 1-844-SMELL GAS (1-844-763-5542) to report it.

Wishing you a
warm & safe
holiday season!
